Deepaksai Cherukuri

Artificial Intelligence and Machine Learning Enthusiast

London Area, United Kingdom

Summary

I’ve always been curious about how technology can turn ideas into something useful in the real world.While studying at the University of East London, I began exploring AI and machine learning beyond the classroom. Instead of stopping at theory, I started building projects that solved practical problems — analysing datasets to uncover patterns, developing machine learning models that improved prediction accuracy, and creating simple web applications that made those insights easier to use.Through these projects, I learned how to take raw, unstructured data and turn it into clear direction. Whether it’s building models in Python, working with Java, or experimenting with new algorithms, my focus is always the same: create solutions that help people make better decisions and save time.Machine learning projects using PythonData analysis and predictive modellingBuilding AI and web-based applicationsStrong foundation in algorithms and OOPSeeking AI/ML Engineer or Data Analyst roles in the UKEach project has strengthened my ability to break down complex challenges, test ideas quickly, and build systems that actually work. I enjoy the process of turning questions into data-driven answers and transforming those answers into tools others can use.Now, I’m working toward becoming an AI/ML engineer who builds practical, reliable solutions that make an impact from day one — while continuing to learn, build, and improve with every opportunity.

Experience

Sainsbury's

Trading Assistant

May 2026 - Present (6 months)

London, England, United Kingdom

Developing strong skills in:

* Customer service

* Teamwork and communication
* Time management
* Problem-solving
* Stock handling and merchandising
* Working efficiently under

Trading Assistant at Sainsbury’s | Customer Service | Retail Operations

Maang Technologies Private Limited
Python Developer
December 2024 - October 2025 (11 months)
Hyderabad, Telangana, India

Built and optimized Python-based applications and automation scripts, reducing manual processing time by 30–40%

Developed and tested backend features using Python and Java, improving application performance and reliability

Analysed structured datasets and implemented ML algorithms to generate insights and improve prediction accuracy

Collaborated with remote teams using Git/GitHub, ensuring smooth version control and faster feature delivery

Debugged and resolved code issues, reducing system errors and improving execution efficiency by 20%+

Supported development of web-based tools using Python, HTML, CSS, and basic JavaScript, improving usability

Tools used: Python, Java, Git, ML libraries (NumPy/Pandas/Scikit-learn), VS Code

Atrisol Technologies
Python Developer
January 2024 - May 2024 (5 months)
Bengaluru, Karnataka, India

Developed Python scripts for data processing and automation, improving workflow efficiency by 25%

Assisted in building small-scale machine learning models for data classification and analysis

Cleaned and analysed datasets using Pandas and NumPy, enabling more accurate reporting and insights

Contributed to web development tasks, integrating backend logic with simple UI features

Tested and debugged code to improve performance, reducing runtime errors and increasing stability

Worked in a hybrid team environment, delivering tasks on time and improving project turnaround

Tools used: Python, Pandas, NumPy, Basic ML algorithms, Git, Web technologies

Education

University of East London

Master's Degree, Computer Science · (2026)
